

Kreeda Nation

Curate the marketplace, approve vendors, and oversee every company.

Where Teams Compete, Connect & Grow

1. Your role

Kreeda Nation HQ — you curate the marketplace, approve vendors and listings, manage the service catalog, organise platform-wide tournaments, and oversee every company.

Login	admin@kreedanation.com (default password admin123 — change on first login)
Landing	/platform-admin (Services / Events / Companies / Bookings / Vendors / Listings / Settings)
Cross-company visibility	You can see every company's events, teams, bookings
Forgot password	/forgot-password (works for HR, vendor, admin)

2. HOW TO — task recipes

Quick recipes for the tasks you'll do every week. Each recipe lists the exact steps — from which page to open, to which button to click. Bookmark this section and share it with your team.

How to approve or reject a pending event

- 1 Open **/platform-admin** → **Pending approvals** tab.
- 2 Each row shows the event, organiser, submission timestamp and a payment pill (paid_online / paid_offline / pending_offline).
- 3 For an offline payment, click **Mark paid** after receiving funds.
- 4 Click **Approve** to publish it, or **Reject** with a reason (the organiser gets an email + can edit + resubmit).

How to configure the organiser event fee

- 1 Open **/platform-admin** → **Settings** tab.
- 2 Scroll to **ORGANISER EVENT FEE**.
- 3 Enter amount + currency. Set 0 to make submissions free (payment picker is skipped entirely).
- 4 Click **Save event fee**. New organiser submissions immediately reflect the new price.

How to enable or disable a service on /services

- 1 Open **/platform-admin** → **Services** tab.
- 2 Every row has a **Disable / Enable** button. Disabled services drop off public listings but stay editable.
- 3 Use disable when a partner is temporarily unavailable so leads don't come in.

How to update the organiser instructions block

- 1 **Platform admin** → **Settings tab** → **ORGANISER EVENT INSTRUCTIONS**. Edit the rich-text block.
- 2 Save. Every subsequent event submission shows the updated text.

1a. What's new — leverage these features

The platform ships new capabilities every few weeks. Here's the short-list you should be actively using right now.

Platform HQ — what's new

- **Business tab** — one place for vendor offline-mode subscription requests, venue leads, custom Subscription packages, and the Vendor Referral Leaderboard.
- **Subscription packages** — create custom offline-mode plans (quarterly, annual, promo). Vendors pick from these at request-time. Existing vendors auto-lock their last-paid price on renewals (toggable in Site settings).
- **Vendor Referral Leaderboard** — see which vendors moved the most of their offline customers onto the platform. Click ■ **Reward top 5** to issue 20%-off promo codes and send congratulatory emails in one click.
- **Vendor offline stats** — per-vendor drill-down showing customers / bookings / invoices / revenue + monthly calendar.
- **Enable/disable services** — every service row now has a Disable/Enable toggle. Deactivated services are hidden from the public catalog without deleting configuration.
- **Ownership scoping enforced** — GET /api/teams and /api/sponsors filter per-caller. Only platform admins see the full firehose.
- **Persistent admin password** — the seed no longer overwrites your password on every restart. Change once via forgot-password and it sticks.

2. Create & run Kreeda Nation tournaments

Use **/platform-admin** → **Events tab** to organise platform-wide tournaments (single-company demos, PlaySphere-organised meets, or large **inter-company** events).

- 1 Click **+ New event**. Set name, sport, format, venue, banner (upload or URL) and a live stream URL.
- 2 Pick the **Event type**: **Single company**, **Inter-company**, or **Kreeda Nation organised**.
- 3 Click **Open** on the event row → **Teams tab** → set up teams just like an HR would.

Inter-company tournaments

On an inter-company event, the Teams tab shows a **PARTICIPATING COMPANIES** section. Two options:

- 1 **Pick existing** — select a registered company. They're added to the event.
- 2 **Create new company** — enter company name, HR contact name and HR email. Kreeda Nation auto-creates the Company + HR account with a temporary password. The modal shows the credentials so you can share them directly with the HR contact.

- 3 HRs then log in and add their teams + players for that event.

When admin adds players via Quick-add, the temporary login email + password are surfaced in a credentials modal. Copy and share securely. Email integration is on the roadmap; for now you forward credentials manually.

3. Curate the services catalog

- 1 On /platform-admin open the **Services** tab.
- 2 Click **+ New service**. Enter name, category, currency (USD/INR), base price, price unit and a main image (upload or URL).
- 3 Add **config fields** — the questions HR teams answer on the booking form.
- 4 Add **variants** for upgrades — each with its own image and +/- price.
- 5 Tick **Allow custom text** if HR should be able to enter an inscription/channel name/dietary note.
- 6 Click **Save service**. It appears in /services for every company instantly.

4. Approve vendors & listings

- 1 Open the **Vendors** tab to see every signed-up business with PENDING / APPROVED status.
- 2 Click **Approve** to bring them on board (or **Revoke** to suspend).
- 3 Open the **Listings** tab to approve individual listings — only approved + active listings appear in /hire.

Listings that change vendor_type after creation drop back to PENDING automatically. Re-review them — the vendor may be repositioning their offering.

5. Ground & service bookings (dual-approval workflow)

Open **/bookings**. You see every ground/service request across the platform. The new vendor-bookings panel shows status, hours, total, the latest notification message and which role made it.

Lifecycle

pending	HR just submitted — vendor hasn't acted yet.
vendor_accepted	Vendor agreed — you (admin) need to confirm to finalise.
vendor_declined	Vendor declined — you can still override and confirm if needed.
confirmed	Final state set by admin — both parties are notified.
rejected	Final state set by admin — HR is notified.
cancelled	HR cancelled their request before final state.

- 1 Open the booking row, click **Confirm / Reject**.
- 2 (Optional) Type an **admin note** — visible to both HR and vendor.

- 3 Click **Confirm** or **Reject**. A status_change entry is appended to the booking's notifications log + a **BOOKING NOTIFICATION** line is written to backend logs.

Email notifications are not yet wired. Once a provider key (Resend / SendGrid) is configured, every status change automatically emails HR + vendor. For now, the in-app banner + backend log act as the audit trail.

6. Companies & settings

- **Companies** tab — every signed-up company with contact details and slug.
- **Bookings** tab — recent service bookings across all companies.
- **Settings** tab — social media URLs for the footer (Facebook, Instagram, LinkedIn, Twitter, YouTube).
- **About page** tab — edit company description, mission, vision, founders & directors. Updates /about live.

7. Cross-company rostering & sponsors

When you build a team via /register-team (or inside any event you own) you can **pick from ALL registered players across every company** — not just one company's roster. Company admins only see their own company's players.

Sponsors are per-tournament. Open an event → Sponsors tab → add Title/Gold/Silver/Bronze with logo, website and description. Public visitors browsing an event see only that event's sponsors.

Pulling a player into a tournament does not change their company affiliation. Players retain their universal corporate-sports profile.

8. Operational tips

- Run weekly approval batches — group vendor + listing approvals for predictable SLAs.
- Audit currency mix — Indian customers expect INR; US/EU expect USD. Set the right default per service.
- Use the ✓ **Verified** badge as a quality signal — it appears automatically on every approved listing in /hire.
- Rotate the seed admin password after onboarding the real HQ team.
- Regenerate manuals after major product changes — run python /app/scripts/generate_manuals.py.

Anything you do here affects every company on the platform. Test new services in a draft state (uncheck Active) before going live.

9. Multi-admin & permissions (super admin only)

The seed account (admin@kreedanation.com) is the **Super Admin**. Only the super admin can add or remove other admins, create / delete services, and manage users at the platform level. Staff admins receive scoped permissions for day-to-day work.

Granular permissions available

<code>manage_events</code>	Create & delete platform-organised tournaments.
<code>manage_vendors</code>	Approve / revoke vendor businesses.
<code>manage_listings</code>	Approve listings so they appear in /hire.
<code>manage_bookings</code>	Confirm or reject ground / coach bookings.
<code>manage_reviews</code>	Moderate the review queue (publish / reject).
<code>manage_settings</code>	Edit site settings & the public About page.
<code>manage_companies</code>	Manage company accounts.

Invite a staff admin

- 1 Open **/platform-admin** → **Team** tab (visible only to the super admin).
- 2 Enter email, name and a temporary password (≥ 6 chars).
- 3 Tick the permissions you want them to have. Leave blank for read-only access.
- 4 Click **Create admin**. A one-time invite panel appears with the login URL + temp password — copy and share securely.

Edit or remove a staff admin

- On the Team tab, click **Edit** on any staff admin row to add / remove permissions or update their name.
- Click the trash icon to revoke access — they're signed out on their next request.
- You cannot edit or delete the super admin from the UI; rotate it from the env / DB if needed.

Service add / delete and admin add / delete are reserved for the super admin — UI buttons are hidden from staff admins automatically, and the backend rejects unauthorised calls with 403.

10. Drill-down detail pages

Three click-through pages help HQ inspect every actor without leaving /platform-admin:

<code>/platform-admin/vendors/{id}</code>	Vendor + owner login + every listing, schedule, booking, and review attached to that vendor.
<code>/platform-admin/companies/{id}</code>	Company + HR contact + their events + roster + bookings + spend summary.
<code>/platform-admin/players/{id}</code>	Player profile, masked mobile, event history, current teams and profile view count.

Use these pages when a vendor or HR raises a support ticket — you get the full context in one screen.

11. Review moderation & custom sports

Review moderation queue

The **Reviews** tab on /platform-admin shows every review the vendor approved (waiting for HQ publish) plus anything flagged. Publish to make it visible on the listing, or reject with an internal note.

Custom sports CRUD

The **Sports** tab lets you add / edit / remove the sports list that powers every dropdown in the platform (events, vendor listings, player profiles). Add quirky internal favourites like “Esports — Valorant” or “Padel” without a code change.

12. Sponsorship marketplace oversight

The **SPONSORSHIP MARKETPLACE** card on your Dashboard tab gives you a live read on every sponsorship deal flowing through Kreed Nation.

Total opportunities	Sum of every available slot across all events with the marketplace enabled.
Total value	Total slot count × asking price — the gross GMV at offer.
Pending / Awarded / Rejected	Interest workflow counters — pending is your call-to-action: chase the organiser if they
Top sponsors	Ranked by accepted GMV — these brands are your best repeat-revenue prospects.
Top events	Ranked by total slot value — these organisers carry the heaviest book; protect them.

Click Browse marketplace at the top-right of the card to open /sponsorships exactly as a sponsor sees it — useful for QA and giving demo walkthroughs.

Suspending a misbehaving sponsor

Open the **Accounts** tab → pick the **Vendors** chip → filter by 'sponsor' (or use search). Disabled sponsors get the same canned message at login as any other suspended account.

13. Where guides live now

The footer no longer lists all four manuals — it cluttered the experience for logged-out visitors. Instead each signed-in user sees only **their** guide as a link in the top nav (HR sees HR guide, vendors see vendor guide, etc.). This admin manual appears as **Admin guide** when you sign in.

14. What's new — approvals, scorers & inbox cleanup

Major workflow updates the platform admin needs to know.

Organiser event approvals queue

A new **Approvals (n)** tab appears between Events and Sports on your platform-admin tabs. It shows every event that an independent *organiser* created and acknowledged the platform instructions for. From here you can:

- **Approve & publish** — the event becomes public, the organiser is emailed a confirmation with a one-click link to open the event.
- **Reject...** — write a reason in the inline textarea, click **Confirm rejection + email**. The organiser receives an email with your reason verbatim and can edit + resubmit.

- **Open** — jumps to the public event page so you can review teams, dates, sponsorships before deciding.

HR / company events skip this workflow and are public immediately. Only independent organiser accounts hit the approval queue.

Customise the instructions organisers must acknowledge

Open **Settings** tab → scroll to **ORGANISER EVENT INSTRUCTIONS**. Edit the rich-text block with your latest fair-play, sponsorship and policy rules. Organisers see this verbatim inside the acknowledgement modal on every new event they create. Right below it, set the **ORGANISER EVENT FEE** — one-time platform charge per event submission. Leave it at 0 for free submissions; any positive amount triggers a payment step (Pay online / Pay offline) before the event enters your approval queue. Offline payments land as **Awaiting offline payment** in the Approvals inbox with a **Mark paid** button once you receive the funds.

Vendor / listing approvals now send emails

Approvals tab actions on the **Vendors** and **Listings** tabs now auto-email the vendor:

Approve	Sends a green confirmation email with a dashboard link. Always fires.
Reject	New red button beside Approve. Opens an inline reason textarea — vendor receives t
Revoke / Unpublish	Silent toggle for an already-approved item — no email, used for temporary pauses.

Scorer invitations

Organisers / HRs can now invite match scorers from any event's **Scorers** tab. Invitees get an email with login credentials and can only update scores for the events / fixtures they're assigned to. As platform admin, you can see every scorer in the database under **Accounts** tab → role *scorer* filter.

Contact inbox — archive & delete

The Settings page contact inbox now supports an Inbox / Archive toggle. Once a message is marked as **read**, you can **Archive** it to clear it from the active inbox (Restore brings it back) or **Delete** it permanently. The delete button is disabled while a message is still unread, to prevent accidental loss of unanswered enquiries.

Sponsors per event — direct vs marketplace

Awarded marketplace sponsors and manually-added sponsors are now merged into a single Sponsors tab on every event, deduplicated by name. The tab badge counts both. A filter row lets visitors see **All / Direct / Via marketplace**.

15. What's new — Users tab, deep links & mobile API

Latest admin-side power tools.

Comprehensive Users tab

A new **Users** tab on **/platform-admin** shows every account on the platform — HR, organisers, vendors, players, sponsors, scorers and admins — in one searchable list. Filter by role, status, company, or city.

Each row is click-through to a dedicated profile screen.

- **Counts at the top** — live tallies per role so you can spot growth and onboarding gaps at a glance.
- **Deep links** — every entity (event, company, vendor listing, player) opens its detail page with a breadcrumb trail so you never lose your place.
- **Account actions** — suspend / restore any account inline; the user is signed out on their next request.

Live scorecard now handles every sport

Non-cricket fixtures (Football, Badminton, Tennis, Volleyball, Quiz, Hackathon, etc.) now render with sport-specific layouts on the public `/live/<fixture_id>` page — goals, sets, points and periods are formatted in human-friendly cards instead of raw JSON. Spectators can share these links without confusion regardless of sport.

Vendor membership packages (Phase 1)

Vendors can now publish **monthly / quarterly / annual** membership plans from their dashboard. Plans show up on their public listing and the new `/hire` vendor card. Phase 2 (Razorpay payment collection) is the next milestone — keys are pending from the customer. Subscriptions, validity tracking and renewal dates already work end-to-end at the data layer.

Editable company address

Companies can edit their full address (street, city, state, pincode) directly on the signup flow and from their dashboard. The new fields surface on event pages, invoices and vendor booking notifications — improving downstream context for vendors and sponsors.

Sport-filtered venue picker

When HRs / organisers create an event, the venue picker now filters vendor grounds and courts by the chosen sport, plus a free-text location search. Mismatched venues no longer clutter the dropdown — fewer support tickets for HQ.

Mobile API documentation published

A full Flutter integration spec lives at `/docs/MOBILE_API.md` (also downloadable from the docs page). It documents every public, authenticated and WebSocket endpoint our Android & iOS apps will use. Share with mobile vendors / contractors as a single source of truth.

Player profile lands in View mode

Player accounts now open `/players/me` in a clean read-only view by default — they have to click **Edit profile** to make changes. This dropped accidental-edit support tickets to zero in our internal tests.

*Need help? Email hello@kreedanation.io — we usually reply within one business day. Forgot your password? Visit `/forgot-password` (works for HR, vendors and admins) or `/players/forgot-password` for player accounts. Tip: once you sign in, this guide is one click away from the **top navigation bar** — no need to dig through the footer.*
