

PlaySphere

Curate the marketplace, approve vendors, and oversee every company.

Where Teams Compete, Connect & Grow

1. Your role

PlaySphere HQ — you curate the marketplace, approve vendors and listings, manage the service catalog, and oversee every company tournament.

Login	admin@playsphere.com (default password admin123 — change on first login)
Landing	/platform-admin (Services / Companies / Bookings / Vendors / Listings / Settings)
Cross-company visibility	You can see every company's events, teams, bookings

2. Curate the services catalog

- 1 On /platform-admin open the **Services** tab.
- 2 Click **+ New service**. Enter name, category, currency (USD/INR), base price, price unit and a main image.
- 3 Add **config fields** — these are the questions HR teams answer on the booking form (Number, Text, Textarea or Select with options).
- 4 Add **variants** when relevant — e.g., Trophy designs, Medal finishes, Banner styles. Each variant has its own image and +/- price.
- 5 Tick **Allow custom text** if HR should be able to enter an inscription, channel name, dietary note, etc.
- 6 Click **Save service**. It appears in /services for every company instantly.

Best practice: keep base price minimal and use variants for upgrades. The price preview in the HR booking form updates live as they select.

3. Approve vendors & listings

- 1 Open the **Vendors** tab to see every signed-up business with PENDING / APPROVED status.
- 2 Click **Approve** to bring them on board (or **Revoke** to suspend).
- 3 Open the **Listings** tab to approve individual listings — only approved + active listings appear in /hire.

Listings that change vendor_type after creation drop back to PENDING automatically. Make a habit of re-reviewing them — the vendor may be repositioning their offering.

4. Companies & bookings overview

- **Companies** tab — every signed-up company with contact details and slug.
- **Bookings** tab — recent service bookings across all companies; jump to /bookings for the full table where you can update status (pending → approved → fulfilled).
- Vendor bookings — visible in /platform-admin under bookings overview; full lifecycle (pending / confirmed / declined / cancelled).

5. Site settings, About page & branding

Social media (Settings tab)

- 1 Open the **Settings** tab on /platform-admin.
- 2 Paste the URLs for Facebook, Instagram, LinkedIn, Twitter and YouTube.
- 3 Click **Save settings**. The footer renders an icon for every link you set, and hides icons for fields you leave blank.

About page content (About page tab)

- 1 Switch to the **About page** tab.
- 2 Edit the company description, mission and vision text — these show up at /about.
- 3 Add **Founders** and **Directors** entries with name, role, image URL, bio and LinkedIn link.
- 4 Click **Save About page**. /about updates instantly across the site.

The /about route is publicly accessible — no login required. It's the standard B2B credibility page; make sure the founders & mission copy is brand-aligned before launching marketing pushes.

6. Tournaments & cross-company rostering

Platform admin can create tournaments directly on /platform-admin (or /admin). When you build a team via /register-team you can **pick from ALL registered players across every company** — not just one company's roster. Company admins only see their own company's players; this is intentional.

Pulling a player into a tournament does not change their company affiliation. Players retain their universal corporate-sports profile.

7. Sponsors are now per-tournament

The global /sponsors page has been retired. Every event detail page now has a **Sponsors** tab where admins (platform or company) can add Title / Gold / Silver / Bronze sponsors with logos, website and description. Public visitors browsing an event see only that event's sponsors — making each sponsorship contract cleanly scoped.

- Per-tournament sponsor lists encourage tiered packages and repeat sponsorships.
- If a vendor is also a sponsor, they appear in both places — no double-counting.
- Removing a sponsor is non-destructive: the historical event card and bracket views remain.

8. Operational tips

- Run weekly approval batches — group vendor + listing approvals for predictable SLAs.
- Audit currency mix — Indian customers expect INR; US/EU expect USD. Set the right default per service.
- Use the ✓ **Verified** badge as a quality signal — it appears automatically on every approved listing in /hire (no manual flag needed).
- Keep the seed admin password rotation policy: change it after onboarding the real HQ team and remove the default.
- Regenerate manuals after major product changes — run `/app/scripts/generate_manuals.py`.

Anything you do here affects every company on the platform. Test new services in a draft state (uncheck Active) before going live.
