

Kreeda Nation

Keep live scores for the matches you've been invited to — nothing more, nothing less.

Where Teams Compete, Connect & Grow

1. What you do on Kreeda Nation

You are a match scorer — invited by a tournament organiser to keep the live score for one or more matches.

- You see only the events and fixtures the organiser explicitly assigned you to.
- You cannot create events, generate fixtures, manage teams, or score matches you weren't invited to — by design.
- Your live updates broadcast instantly to anyone watching the public scorecard (no refresh needed).

2. Your invitation & first login

- 1 An organiser invites you by email from inside their event's **Scorers** tab. You receive a branded email with your login credentials (email + temporary password).
- 2 Click the **SIGN IN TO SCORE** button in the email — it lands you on the Kreeda Nation login page.
- 3 Sign in with your email + the temp password.
- 4 You are taken directly to **/scorer/dashboard**.

Didn't get the email? Check spam, then ask the organiser to share the temp password they see inline on the Scorers tab when they invited you.

Change your password

Open your profile menu in the top-right and pick **Reset password** — or use **/forgot-password** any time.

3. The scorer console (/scorer/dashboard)

Your home screen. Every event you've been assigned to is listed here, with the specific fixtures you can score.

Event card	Sport, venue, start date and your scope (All fixtures or N specific fixtures).
Open event →	Jumps to the public event page. The Fixtures tab shows the same matches you can score.
Fixture chips	Each fixture shows match number, round, status (Scheduled / Live / Completed) and a

4. Score a match

- 1 From `/scorer/dashboard` click any event card → **Open event** →.
- 2 Switch to the **Fixtures** tab. The matches you're allowed to score have a **Update score** button.
- 3 Click **Update score** to launch the sport-specific scorer (cricket: toss + playing XI + ball-by-ball; football: goals; badminton: sets; etc.).
- 4 Updates push instantly to all live spectators via WebSocket.

For cricket — set the toss, pick the playing XI, then pick striker / non-striker / bowler before the first ball. The system rotates strike automatically on odd-run balls and end-of-over events. Use the **Undo** button if you mis-tap a ball.

You cannot score a fixture that isn't on your assignment list — the **Update score** button won't show and the backend rejects unauthorised attempts.

5. Frequently asked

Can I be assigned to multiple events at once?

Yes — every event with at least one assigned fixture for you appears on your dashboard.

What if I no longer want to score?

Ask the organiser to remove you from their event's Scorers tab — they have a trash icon next to your row. Your account stays; only the assignment is revoked.

Can the organiser change my scope after inviting?

Today they need to remove and re-invite. Scope-edit-in-place is on the roadmap.

6. Where to find this guide

Once signed in as a scorer, this manual is one click away from your top nav as **Scorer guide**.

7. What's new — sport-specific scorecards & mobile app

Non-cricket scorecards are polished

If you're scoring Football, Badminton, Tennis, Volleyball, Quiz or Hackathon matches, the public scorecard at `/live/<fixture_id>` now uses sport-specific layouts — goals, sets, points, periods are rendered in clean cards (no more raw JSON). Spectators get the same instant-update experience as cricket fans.

Native Android & iOS apps in build

We've published the developer Mobile API spec at `/docs/MOBILE_API.md`. Once the native apps land, you'll be able to score matches from your phone instead of needing a laptop courtside — perfect for outdoor venues with patchy desk space.

Need help? Email hello@kreedanation.io — we usually reply within one business day. Forgot your password? Visit `/forgot-password` (works for HR, vendors and admins) or `/players/forgot-password` for player accounts.

*Tip: once you sign in, this guide is one click away from the **top navigation bar** — no need to dig through the footer.*
